

CONSTRUCTION AT THE LONDON 2012 OLYMPICS

USING A CDE TO MANAGE TIME, COST AND QUALITY ON A £1.3BN PROJECT

The Athletes village

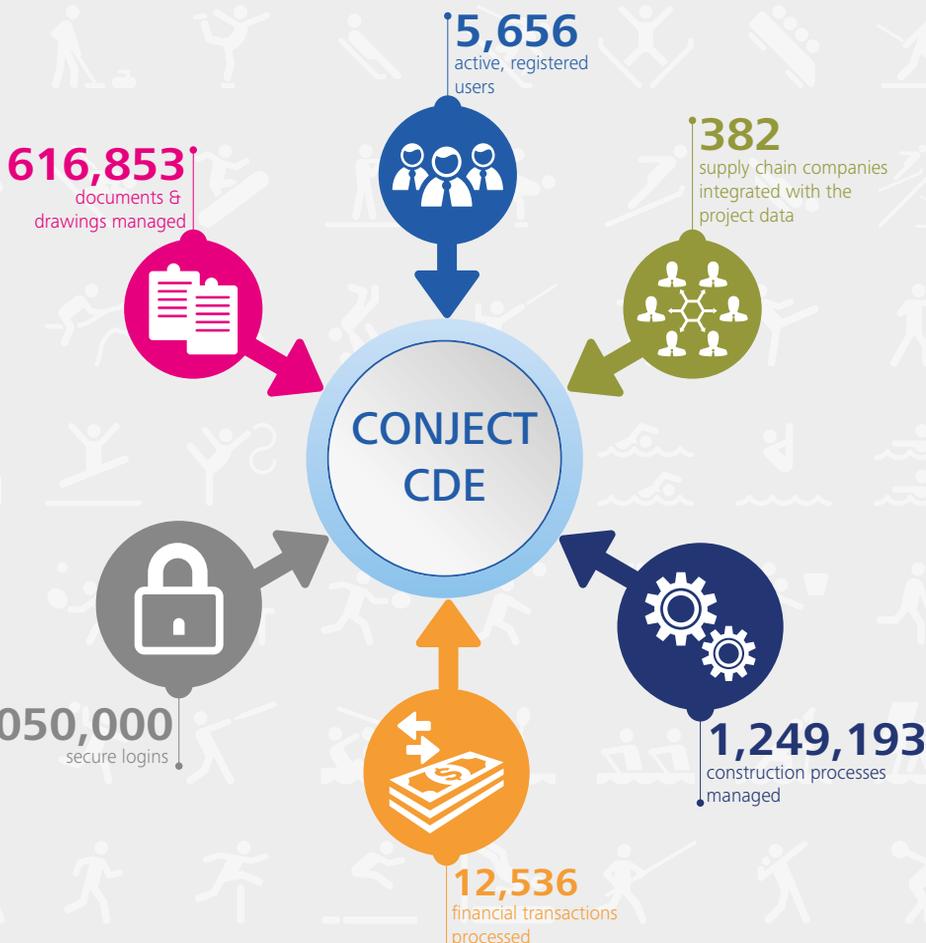

Constructing 63 buildings containing 2,818 high quality homes, a town hall, a hospital and associated infrastructure would see the Athletes Village become the largest residential construction project in Europe during the build up to the 2012 Summer Olympic Games.

The contractors challenge

Responsibility for delivering this project resided with management and construction company LendLease who needed to coordinate and control documents, designs, drawings and financial instructions between the hundreds of subcontractor organisations who would work on the project.

LendLease had to ensure that the supply chain were working with the very latest data to ensure effective collaboration and to reduce the risk of errors. With an immovable deadline, this was a logistical and administrative challenge of the highest magnitude which simply could not be managed manually.

A configurable and robust project control tool was required where all data exchanges were controlled and audited, where a real-time view of project status at a time, cost or quality level could be made at the touch of a button. Which is why LendLease chose the Common Data Environment application from CONJECT.

“Using a non-collaborative application we would have had to have applied a great deal of resource resolving issues. With CONJECT we were confident that costs, statuses and reports were valid and accurate.”

Khuong Lac, Lead Applications Specialist, LendLease

“The programme being built on time is testament to the CDE. The system ensured effective compliance from our supply chain and governance over what was one of the largest, most high profile construction projects the UK has ever seen.”

Chris Webster, Regional Applications Practice Manager, LendLease
